Partner with us. Together we can fulfill dreams.
Situated in the heart of Haifa’s ‘up and coming’ port district, the University of Haifa’s new Downtown Campus will be a leading academic and research hub for the rapidly growing fields of computer and information sciences, digital health, big data, and artificial intelligence.

The Downtown Campus will be the academic pillar of Haifa’s urban renewal project and a cornerstone of its revitalized high-tech center. The Campus will be the new home to the University’s Departments of Computer Science and Information Systems. Computer science students will attend classes that are steps away from Haifa’s high tech parks, venture initiatives, start-ups, and businesses in the area. The convenient downtown location is easily accessible by Israel railways – from both Tel Aviv and Israel’s northern region.

The Campus will include four historic buildings, requiring renovation and adaptation to academic needs. The new Dylan Tauber Building will house computer science classrooms, faculty offices, a digital health research center, and state-of-the-art big data laboratories.

“We continue to grow in ways that serve the needs of our students and the local Haifa community,” notes President Ron Robin. “The University of Haifa Downtown Campus is an exciting development in our strategic plan, which will accelerate institutional growth and transform the University of Haifa into Israel’s first ‘Multiversity’.”

A gift of $5 million will enable the University to dedicate a downtown building in your name.
