Break New Ground in Interdisciplinary Archaeology Research

Establishing the School of Archaeology
The University of Haifa is spearheading an academic model that crosses traditional scientific boundaries to address critical questions related to human history and Jewish heritage.

“Our faculty members come from diverse backgrounds,” explains Prof. Guy Bar-Oz, Chair of the Department of Archaeology and recent recipient of a prestigious grant from the European Research Council. “Our goal is to build a world-class school that links cutting-edge, interdisciplinary field research and heritage conservation efforts with educational and outreach programs. We want to ensure that our past comes alive.”

The mission of the new School of Archaeology is to elevate archaeology research in Israel, serving as a catalyst to lift Israeli universities to the upper echelon of international archaeology rankings. It will be home to a vibrant research environment where physicists, geneticists, mathematicians, geographers, historians and anthropologists collaborate to generate novel solutions to complex problems.

“We believe that archaeology has an important role to play in uncovering and preserving the Jewish people’s historical and cultural ties to the Land of Israel,” asserts Prof. Bar-Oz.

A generous gift of $10 million will enable the University of Haifa to build the School of Archaeology and dedicate it in your name.
