Establishing the Faculty of Engineering in Karmiel

Expand Academic Offerings to Engineering Sciences
Under a new academic agreement currently in process, the highly-regarded ORT Braude College in Karmiel will become the University of Haifa’s new Faculty of Engineering. As the University’s new engineering portal, it will be able to offer engineering students in northern Israel an opportunity to combine an engineering degree with a wide array of complementary academic programs.

“Engineering students who graduate with a dual degree will have a competitive advantage when they enter the workforce. Armed with dual competencies, our students will have a broader skill set and the flexibility to traverse and integrate different disciplines and industries,” boasts President Ron Robin.

The new engineering portal will become a scientific center for the Galilee, strengthening the region and its diverse population.

Offering BSc degrees in engineering fields, including Electrical, Mechanical, Industrial, Optical, Software and Information Systems, and MSc degrees in Biotechnology, Software Engineering, Systems Engineering, and Industrial Engineering and Management, the new Faculty will attract students living in peripheral communities, and prepare them for high demand professions in Israel’s burgeoning hi-tech field.

“The ability to write, communicate, and think critically are essential skills for all career paths, including engineering, and students with dual degrees are positioned to assume leadership roles beyond the technical realm,” concludes President Robin.

A gift of $10 million will enable the University of Haifa to dedicate the new Faculty of Engineering in your name. Naming opportunities are also available for the Departments of Biotechnology Engineering and Mechanical Engineering.
