Establishing the University of Haifa Medical Campus
located at the Helmsley Health Discovery Tower at Rambam Health Care Campus

Partner with us. Together we can fulfill dreams.

Accelerate Research and Innovation in Patient-Centered Medicine
The Helmsley Health Discovery Tower is a first-of-its-kind partnership between the University of Haifa, Rambam Health Care Campus and the Technion–Israel Institute of Technology. University of Haifa life sciences researchers will work collaboratively with Rambam clinicians and Technion biomedical engineers to foster novel ideas for the transformation of health care at the local, national, and global levels. The proposed 20-floor Tower is slated to be among the most advanced medical research institutes in the world, acting as a magnet for medical research and technology transfer.

“By bringing together researchers, start-ups, and health care professionals from these three leading institutions, we will create an environment that fuels scientific innovation, capable of addressing today’s and tomorrow’s most pressing health challenges,” says President Ron Robin.

A generous gift of $15 million will enable the University to dedicate the University of Haifa Medical Campus in your name. Additional naming opportunities are available for research facilities.

Six floors of the Helmsley Health Discovery Tower will house University of Haifa laboratories to support basic and applied research in neurobiology, personalized medicine, nursing, and public health. The Tower’s close proximity to the hospital will provide access to health care practitioners, patients and their families, and to state-of-the-art clinical resources, such as imaging devices, genetic testing and advanced equipment systems.

“Collaborative research at the Helmsley Health Discovery Tower will accelerate patient-oriented research and innovative medical interventions. We believe that it will also have a broad educational, economic and social impact on the city of Haifa and northern Israel,” adds President Robin.
